# Introduction

When you contract us for project management, we oversee an entire process – or multiple elements – of setting up, refitting, or relocating a warehouse or distribution center from start to finish.

That will be based on a bespoke services agreement draw up to meet your needs, with structured scopes established based on individual tasks within the project and clearly defined roles, responsibilities, benchmarks, and deadlines.

# What does project management offer?

Project management is ideal for projects with:

Significant complexity

Multiple stakeholders

Large teams

Varied tasks

Tight deadlines

High visibility

# Project management overview

When you choose our project management services, we will work with you to draw up a comprehensive plan of all of the infrastructure and features you need, which we will then supply and install.

We will also be able to provide ongoing support, including inspections of equipment, servicing and repairs as needed, and can also provide periodic professional cleaning services.

# 4 key elements of project management services

## 1. Project planning

We work with you to define the requirements and objectives of the project, establishing timelines, benchmarks and deadlines, and managing local providers when needed.

## 2. Project implementation

We oversee the implementation of the project, managing the teams involved in installations and other tasks, while regularly keeping you up-to-date on progress.

### **3. Project delivery**

We guarantee the delivery of the project as set out during planning, providing confirmation of every milestone being hit and undertaking relevant project completion activities.

### **4. Project management consultancy**

We provide consulting services to help clients identify opportunities to streamline and improve operations, including recommendations related to best practices and security.

# Our experience

During our years of working in the logistics industry, we have developed a reputation for being able to hit tight deadlines without sacrificing safety standards or quality, and some of the biggest and best known companies in the world count us as a trusted partner.
