Introduction

Floor marking allows you to establish zones and corridors throughout your facility, and thereby bring more organization to the space. Maintenance, meanwhile, helps you to keep the floor in good condition. Each of these services make operations more efficient and keeps both people and goods safer.

When it comes to installing floor marking, a number of options are available to suit different needs, while in most jurisdictions there are clear guidelines on the colors and dimensions used, which is why it pays to work with specialist professionals.

Why are floor marking and maintenance important?

Floor marking and maintenance offer:

Better organization

Greater safety

Operational efficiency

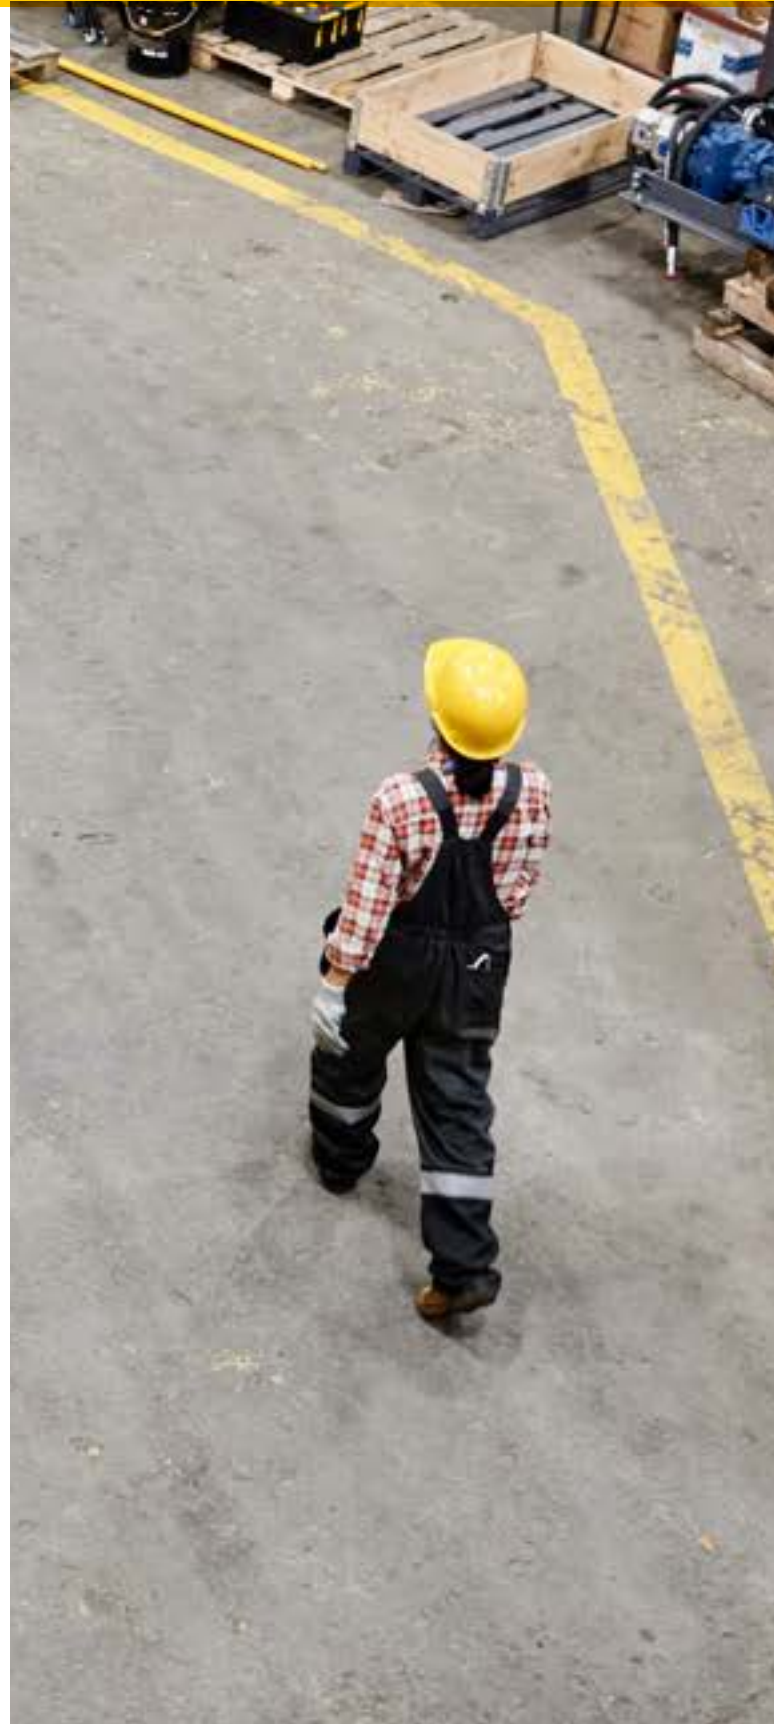

Long-term savings

Regulatory compliance

Reduced risks

Floor marking services

Floor marking is generally installed using one of three materials:

- Thermoplastic
- Paint
- Tape

Each of these offers its own advantages in terms of durability, modifiability, and costs, so choosing which is best for you will depend on your needs and resources.

Thermoplastic floor marking

Thermoplastic floor marking involves the application of thermoplastic materials to create durable, highly visible and long-lasting markings on various types of floor surfaces.

These markings are commonly used for safety, organizational and traffic management purposes in industrial, commercial and institutional settings.

Key advantages of thermoplastic floor marking:

- Long lifespan
- Easy maintenance

Painted floor marking

Painted floor marking involves the application of paint to create markings, lines, symbols and signs on various types of floor surfaces. Painted markings can be applied using several types of equipment, including brushes and rollers, airless sprayers, stencils, and tape.

Key advantages of floor marking using paint:

- Long lifespan
- Quick installation

Tape floor marking

Tape floor marking involves the application of adhesive tape to create markings, lines, symbols and signs on floor surfaces. High quality floor marking tape is designed to affix securely, resist wear and maintain their visibility over time. Floor marking tape is available in various colors and widths, allowing for customization. Specialized tapes, such as reflective or anti-slip, can also be used to enhance safety and visibility.

Key advantages of floor marking using tape:

- Easily modified
- Cost effective

Floor maintenance services

Floor maintenance services are composed of two key elements:

- Protecting floors
- Repairing floors

Protecting floors generally involves laying protective epoxy resin over the surface, while repairing floors involves sealing cracks and other damage.

Laying epoxy resin

Protecting warehouse flooring involves the application of epoxy resin coatings to concrete surfaces. It is known for its durability, strength and versatility. It generally involves a two-component epoxy resin system that is mixed just prior to application and offers a highly durable coating to the floor that is also easy to repair.

Benefits of epoxy flooring:

- Durability
- Easy maintenance
- Versatility
- Hygiene
- Chemical resistance

Crack sealing

Crack sealing involves sealing or filling cracks and joints in various surfaces, which will most typically be asphalt or concrete. This service will often be a precursor to laying epoxy resin, to make sure that a good and even surface is established before it is protected.

Benefits of crack sealing:

- Preventing infiltration
- Prolonging lifespan
- Boosting safety
- Cost efficiency
- Improving appearance

Serviap Logistics

Floor marking and maintenance services

At **Serviap Logistics** we offer warehouse setup and optimization services in Brazil, Mexico, and the United States.

As well as comprehensive project management services, we also offer standalone services that include floor marking and maintenance services, as well as providing and installing warehouse racking, signage, and collision protection. We also supply labels and offer industrial cleaning services.
